

Energy- and climate advice

The advice is financed through support from the Swedish Energy Agency.

Grants from the Swedish Energy Agency

- **1977-1985 Energy saving plan for existing buildings**
- **1997-2020 Energy and climate advice will contribute to increased energy efficiency and more renewable energy.**

The energy and climate consultancy will contribute to achieving Sweden's climate and energy goals. The advice should be free and independent.

Target group

The public, companies, organizations, associations and schools

Kommunal energi-
& klimatrådgivning

Objective

Reduce energy use and its climate impact in premises and housing, as well as for passenger and freight transport.

- reduce the use of fossil energy
- More efficient energy use
- Renewable energy

The assignment involves collaboration between

- Energy authority / Energy office / energy and climate advisers
- Other administrations within the municipality in various projects
- Other organizations, for example, BioFuel Region

The assignment means that we

- Participate in “focus projects” led by the Energy Authority and the energy office. During Jan 2018 to Sept 2019, the focus is on solar cells and charging of electric cars.
- Contact and offer companies with boilers and air conditioning advice.

What was done 2018

In addition to questions by phone, email and visits we arrange

19 lectures - 850 people attended. (general, companies, tenant associations and school, mainly about solar energy / solar cells and charging poles for electric cars)

7 exhibitions / fairs

4 workshops

Thank You!
